Empathy Map

Think & Feel

- Which technology is best?
- Time complexity should be less
- Where can I get the data?

Hear

- Histograms of various digits, it is possible to differentiate between them?
- Is this expensive?

Say & do

- Easy to identify the hand written digits
- The model can identify the handwritten digits
- User friendly application

See

- Make the character matching method realistic to identify handwritten digits provided in the MINIST dataset for handwritten digital images
- A better UI which satisfies the clients

Pain

- May or may not found 100% accuracy
- Not everyone's handwritten is the same, everyone writes differently

Gain

- Used by countless organization, schools, banks and even for family activities
- Faster than manual
